

Point. Shoot. Done.

SiteMaster® EPC

Professional Energy Performance Certificates & Reports

Easy. Accurate. Profitable.

What is SiteMaster® EPC?

Graebert SiteMaster® EPC is a leap forward in the commercial EPC process, developed by the German software manufacturer Graebert GmbH who is responsible for the unique and excellent SiteMaster® mobile CAD survey. Graebert SiteMaster® EPC uses SiteMaster® as its framework in producing the floor plans required for an EPC, but then prompts the assessor to enter further details required for an EPC.

Graebert SiteMaster® EPC is fully integrated with iSBEM and automatically enters the data from the site plan to produce an EPC on site, where a network connection is available!

Assessors use a tablet PC (we recommend the Archos 9 as shown above or the Viliv X70) and a Bluetooth Laser Measure such as the Leica D3a-BT to plot the building into the software. Minimal equipment helps ease of surveying with no need for paper and pencil, data is stored easily, can be adapted easily and forwarded on to be audited easily.

Graebert SiteMaster® EPC not only reduces an assessor's workload it also presents additional revenue streams from the same process, requiring little or no extra work.

The highly accurate CAD plans produced whilst creating the EPC can be sold on to be used as:

- Floor plans for sales purposes
- Fire safety plans
- Lease plans
- Architectural plans
(although higher degrees of accuracy will have to be obtained)

Graebert SiteMaster® EPC was designed in conjunction with footPRINT Energy Assessments Ltd – a firm of Level 3 and Level 4 Assessors who recognised the benefit of working and producing live CAD plans on site. They knew firsthand the labour intensive process of producing an EPC and felt an easier approach was urgently needed.

Benefits in using SiteMaster® EPC

① Commercial EPC on site

Graebert SiteMaster® EPC reduces mistakes and need for site re-visits. It actively increases profitability or competitiveness, due to reduced processing time.

② Highly accurate plans

Graebert SiteMaster® EPC speeds up the survey process while providing the option to sell plans for fire safety, floor plan and lease plans right away. It increases profit per survey and is easy to check and update

③ Autocompletion of all calculations

Graebert SiteMaster® EPC eliminates the need for manual processing, increases profitability or competitiveness, due to reduced processing time and eliminates human error.

④ Whole EPC in a digital file

Easy to check and update, digital results of the survey can be stored, shared and distributed in an online database. This reduces need for storage space and increases flexibility.

⑤ EPC survey all carried out on Tablet PC and a BlueTooth Laser Measure Device

Using latest technology increases accuracy dramatically. Having the survey all carried out on a Tablet PC and a Bluetooth Laser Measure Device provides a professional appearance, eliminates paperwork and allows easy adjustments and detailed enrichment with information on-site.
